

# **PRELIMINARY RESULTS OF ORBIT ESTIMATIONS FOR GRACE-A AND GRACE-B**

***M.Rutkowska, J.B.Zielinski***  
**Space Research Centre**  
**Polish Academy of Science**  
**Warsaw, Poland**

# **GRACE**

**Mission GRACE (the Gravity Recovery And Climate Experiment) is a joint US/German satellite mission. The GRACE mission have two identical spacecrafts flying about 220km apart in a polar orbit 500km above the Earth.**

# **GOALS OF THE GRACE MISSION**

- The mapping the Earth gravity field by making accurate measure of the distance between the two satellites using GPS and range rate systems.
- The results from this mission will give information about the distribution and flow of mass within the Earth.
- Investigation of distance changes GRACE A and GRACE B due to surface and currents in the ocean: runoff and ground water storage on land masses, exchange ice sheets or glaciers and the oceans and variations of mass within the Earth.

- 
- Creation a better profile of the Earth's atmosphere.
  - Studies of the global climate changes.
  - Satellite laser ranging data will be used for validation of GPS Precision Orbit Determination.

## DYNAMIC MODEL

Gravity field GRIM5S1 (99,99)

Wahr solid earth tides: NASA/NIMA EGM96 ocean tides

Atmospheric drag DTM87

$C_D$  solved for in half-day intervals

$C_R$  direct solar radiation pressure equal to 1.2

Albedo and infrared Earth radiation

Relativistic effects

Acceleration in along-track and cross-track

## REFERENCE FRAME

ITRF97 for epoch 1997.0 (model of station coordinates –fixed)

IERS C04 earth orientation precession according to IAU 1976 (Lieske model)

Nutation according to IAU 1980 (Wahr model)

Pole tide

Ocean loading deformation, atmospheric pressure loading deformation

## **COMPUTATION**

Cowell 11-order predictor-corrector; step-size 15 sec  
The solutions were produced employing the software  
combination GEODYN II (Eddy et al., 1990).

It is described by (McCarthy et al., 1993)

Provided by NASA GSFC

Assistance of dr.Dave Rowlands is kindly  
acknowledged

## OBSERVATIONS

GRACE-A – two arcs 874 normal points  
(2002.05.05-2002.05.21)

GRACE-B - two arcs 901 normal points  
(2002.05.05-2002.05.21)

normal points provided by CDDIS and EDC,  
Marini-Murray model for tropospheric delay  
Center –of-mass correction not used,  
Station-dependent data weighting
